

Product:

SCU- Signal Conditioning Unit

View:

Description:

SCU – The Signal Conditioning Unit is only capable of transferring sensor feedback. Some OEM has the capability of performing the required calculation for Intellimold processing, or in the case of a retrofit system this is how we would transfer the transducer feedback to the I/O's. Signal conditioning is provided for strain gage transducers but the ability to adapt to piezoelectric sensors is supplied.

Required Components:

A sensor package is the only requirement for signal conditioning.
